Description	Not Started	In Progress	Completed
<b>1.7.1</b> Identify critical systems and files that are not accessible from outside the business offices and develop a plan for remote access.			
<b>1.7.2</b> Deploy secure remote access to critical on-premise systems using SSL VPN or a secure remote gateway product.			
<b>1.7.3</b> Enact MFA for remote access to all critical data and systems.			
<b>1.7.4</b> Determine the availability of laptops/equipment for remote access endpoints.			
<b>1.7.5</b> Determine the risk involved in allowing employees to connect via personal/BYOD devices.			
<b>1.7.6</b> Deploy VOIP phones to ensure that internal/external voice communications can be handled without disruption.			
<b>1.7.7</b> Deploy video collaboration software to enable more natural communication when teams are working remotely.			
<b>1.7.8</b> Identify sensitive data and ensure that technology is in place to share this data safely. Disseminate a documented policy surrounding the safe handling of this data in the event of remote work.
